DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 29 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dennison (U.S. Pat. 5,362,666).

Dennison discloses the method for forming a container capacitor, comprising the steps of:

providing a cup-shaped bottom electrode 42 (cover Fig.);

providing an insulating layer 58 around an exterior surface of the cup-shaped bottom electrode (cover Fig);

depositing a dielectric layer 50 on part of the exterior surface (cover Fig.);

and

depositing a conductive layer 52 on the dielectric layer (cover Fig., column 11, lines 4-12).

Dennison does not particularly point out the step of masking a first portion of the insulating layer and etching a second portion of the insulating layer from a part of the exterior surface. However since some masking must be performed to limit the area in which etching as shown in Figures 4-8, use of a mask is inherent in the process, and it would be obvious to use a mask to limit the etching.
